Benefits of UV

- superior physical properties
- instant drying
- water free
- solvent free
- no flammability risk
- reduced clean up
- lower energy consumption
- elimination of pollution
- adaptability
- custom design and production
- infinite combination of uses
- tremendous productivity gains
- all at a lower cost to you

More for Less

A reasonable misconception would be that UV cured products come at a higher cost than traditional solvent based approaches. For a more realistic view, look at actual applied cost per dry mil (or per item coated or adhered). Examine the cost for 1604 sq.ft. per gallon per mil. of the following coating types (applied in identical rollcoats and thicknesses):

Coating Type	Total Solids by Volume	Cost per gal. of material	Cost in \$/sq.ft./dry mil
Traditional Coating	32.62%	\$13.67	.0262
UV Cured Coating	99.69%	\$35.00	.0219

That's a **SAVINGS** of **OVER 16%**

With Northwest Coatings UV Coatings, the choice is...

Northwest Coatings is a proud member of RadTech International which can provide more information about UV/EB curing and its benefits.
