

Cycletime Tips - General

Volume 21: General Polymers Expands Web Site

By Cary Weldy

Many new additions have been made to the General Polymers web site. By bookmarking this page, you can access valuable information that can improve productivity.

The opening page has been redesigned, focusing on the latest news releases and announcements:

The second page of the web site, which is reached by clicking on your industry, includes a menu of options, many of which are new additions.

Users may now access the current and past issues of CycleTime Tips, a monthly newsletter containing technical tips on processing, tool design, etc. This valuable resource can help maximize manufacturing efficiency.

A geographical map has been added, identifying the 21 GP district offices in the United States, Canada and Mexico. By clicking on the area of the map the user is interested in, you can see the address and phone number of the nearest district office. Also, the user may send an E-mail message to that district office.

The latest addition to the GP web site is the Value Products page. This page includes one-time product offerings at special pricing. This section also includes a search engine, where the you may search by resin type, supplier, or grade name.

General Polymers' new Product Catalog, available now on diskette, will be added to the web site soon. The Product Catalog will include updated technical data sheets, processing guide, troubleshooting guide, and a user-friendly search engine, in which the user may search for materials with up to 18 performance parameters and compare up to three materials at a time.

For more information, call 1-800-828-7659.
