

aquarius™ protect film coating systems

reduce moisture uptake and mask against offensive taste and odor

key features and benefits

- superior barrier protection for use in dietary supplements looking to prevent black spots in multivitamins
- very effective under environmental conditions defined as zones 4 & 5 by stability guidelines
- can be processed at low temperatures and provide energy savings

description

Aquarius™ Protect is the premium multi-functional barrier coating system that effectively reduces moisture uptake and masks against offensive taste and odor.

Aquarius™ Protect multifunctional coating systems are fully formulated, ready-mixed systems that disperse quickly in water or other solvents. Clear coatings can be sprayed at 10–12% solids, and white and colors can be sprayed up to 20% solids while remaining non-tacky and achieving significant process savings. These coating systems, composed of cellulose derivatives and a natural wax blend, provide superior barrier properties, and efficient processing and flexibility without compromising drug release.

Aquarius™ Protect MB is a fully formulated, ready to mix, high solids moisture barrier coating based on polyvinyl alcohol (PVA). In addition to improved productivity from high solids and low viscosity, these coating systems provide attractive glossy appearance and clear crisp logos. To reduce impurity concerns, this system was developed without polyethylene glycol (PEG).

Aquarius™ Protect and Protect MB film coating systems have easy and efficient application using standard spray equipment and process conditions. All ingredients have FDA and EU direct food additive and/or Generally Recognized as Safe (GRAS) status. Compliance for specific formulations is listed on the certificate of analysis.
